

Mosquito and Tick Treatments Are Great For:

- | | |
|--------------------|--------------------------|
| Residential | Business Facilities |
| Hotels and Inns | Housing Communities |
| Special Occasions | Golf Courses |
| Weddings | Driving Ranges |
| Reunions | Campgrounds |
| Parties | Child Care Facilities |
| Graduations | Schools |
| Sporting Events | Assisted Care Facilities |
| Municipal Programs | Outdoor Eateries |

“Tick-Safe Zones,” should be created for homes, parks, fields and recreational areas. Increasing exposure to sun and air by removing leaf litter and tall grass will reduce the number of ticks. Laying down wood chips where lawns and recreational areas reside can create a dry barrier and reduce the tick population.

MOSQUITO SOLUTIONS

Atlantic Mosquito and Tick Solutions offers both natural and conventional long term programs for controlling adult mosquitoes on your property. Additionally, we identify standing water which acts as breeding sites for mosquitoes. This aids in control before they become breeding, biting adults. Unfortunately, not all of the mosquitoes you encounter on your property originate there. This means an ongoing treatment regimen is your best option for protecting you and your family, so you can continue to enjoy your outdoor activities.

HOW MANY SERVICES ARE REQUIRED?

Mosquitoes develop, mature and lay eggs in standing water (see diagram), whenever the conditions are right, which is most often in the warmer months. We offer several different programs to help you find the best treatment programs for your home or business.

ARE THE PRODUCTS USED RECOMMENDED FOR USE AROUND PEOPLE AND PETS?

Our products can be utilized around people and pets with confidence. Once the application is complete and has dried, you and your family can continue to use your yard as you normally do. Looking for a [green program](#)? We've got you covered.

TICK SOLUTIONS: HOW DO I REDUCE THE POPULATION ON MY PROPERTY?

Deer ticks require a complicated two year lifecycle.

- Keep grass mowed and well groomed
- Remove yard clippings (move grass piles, brush)
- Create raised flower beds or ornamental plantings in containers
- Discourage deer and rodent activity

HOW DO I PROTECT MYSELF FROM TICKS?

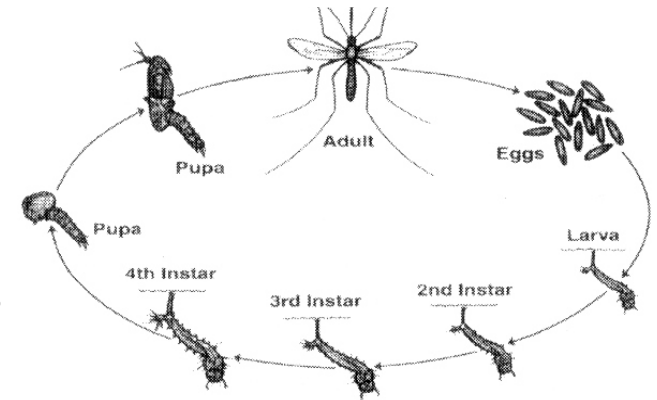

- Wearing light colored clothing makes spotting a tick easier
- Pants should be tucked into socks
- Shirts should be tucked into pant waistband
- When out walking/hiking, stay on the path
- Use approved insect repellent when outdoors
- Avoid areas known to have dense tick population
- Inspect your body immediately upon return
- Speak to your veterinarian on ways to protect your pets
- Relocate children's play areas away from the woodland edge

***Ixodes scapularis* (deer tick)**

TICKS WILL ATTACH ANYWHERE
UNDERARMS, WAISTBAND, HEAD, THIGHS,
HAIRLINE, BEHIND THE KNEES AND KNAPE OF NECK

THE MOSQUITO LIFE CYCLE

WHERE DO MOSQUITOES BREED?
Roof Gutters, Bird Baths, Old Tires,
Flowerpots, Tree Holes, Pool Covers, Urns,
Rain Barrels, Water Gardens, Ornamental
Fountains & Retention Pools
